

## POLYNUCLEOTIDES: Freshen Your Under Eyes

### WHAT ARE POLYNUCLEOTIDES?

Polynucleotides are an excellent treatment for anyone who would like to improve their delicate under eye area.

It is a brilliant alternative to tear trough filler for patients who don't want it or are not suitable.

Polynucleotides give a refreshed, healthy and natural look without changing your facial features.

Not only does it help to decrease puffiness under the eyes, it can also reduce under-eye hollowness, shadowing, and under eye lines and wrinkles.

Polynucleotides have been scientifically proven to increase collagen and elastin production in the skin, thereby helping to preserve its youthful appearance.

Deeply hydrates, detoxifies free radicals, protects skin from ageing and improves skin elasticity.

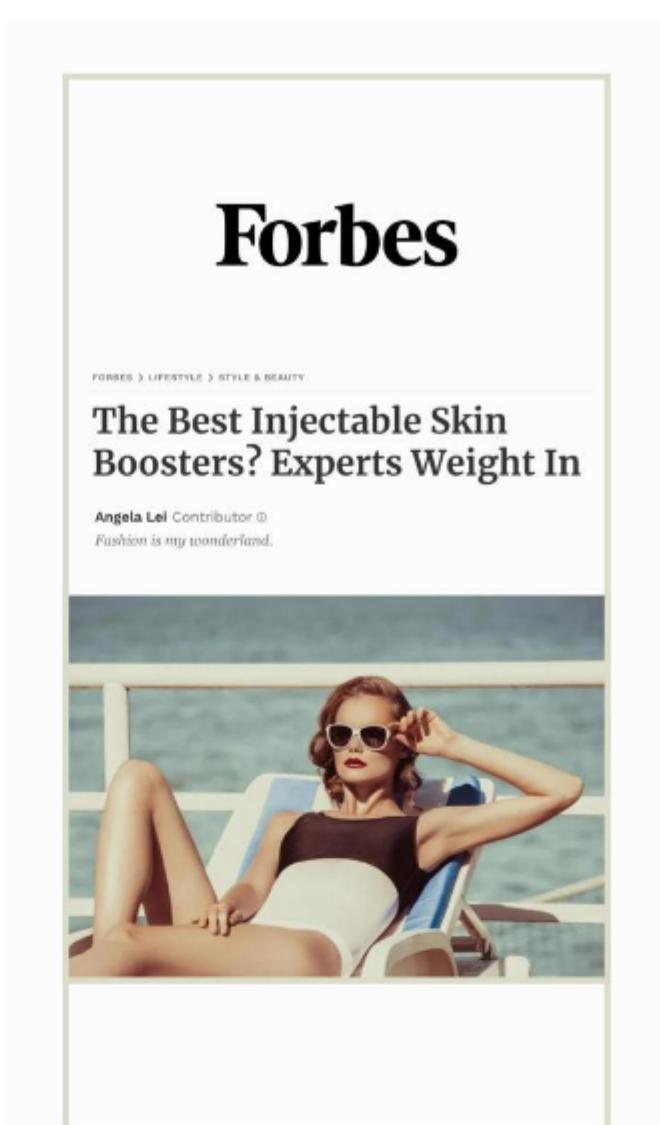

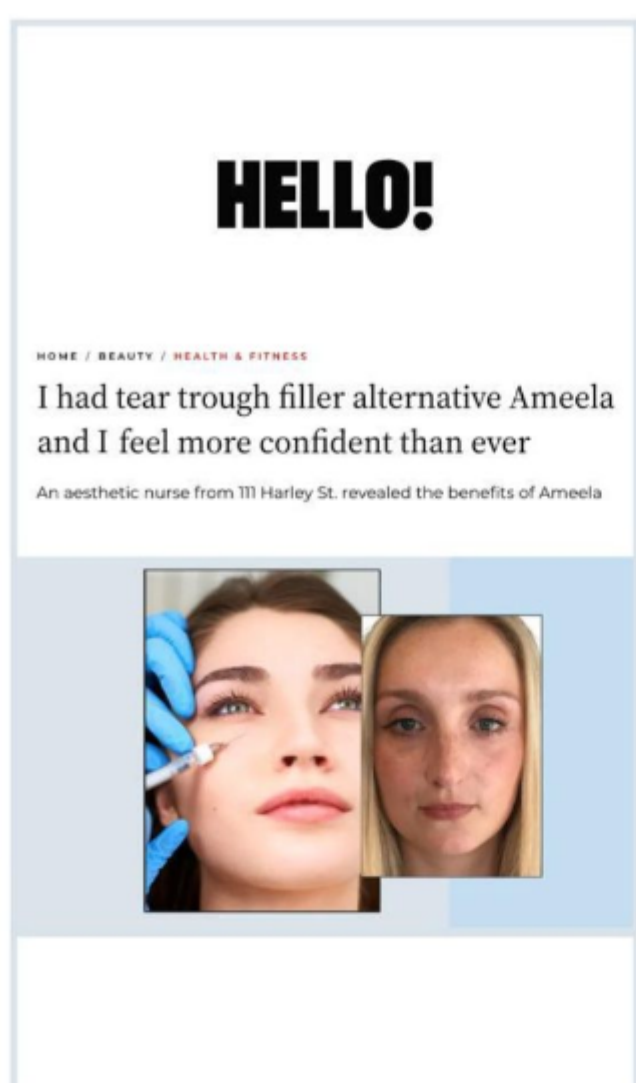

The skin becomes tighter, moisturized and softer, which results in a healthy looking, refreshed and a well-rested appearance.

### WHO DO I SEE FOR THIS?

Our lovely Gosia Macpherson who works with us on Fridays. She offers bespoke non-surgical facial procedures, ensuring that you will look and feel confident as all she only uses premium products. Her treatments are designed to slow down the ageing process by enhancing natural beauty with diligence, precision and care. Her goal is to always provide high standards of care and to always give natural, undetectable results without compromising an individual's character and appearance.

Here are a couple of articles about Ameela Polynucleotides.
